Journal of Non-Crystalline Solids 216 (1997) ix–xi

JOURNAL OF NON-CRYSTALLINE SOLIDS

Contents

Preface vii
Contents ix

Section 1. Electronic and atomic structure

On the origin of the 5.0 and 7.6 eV absorption bands in oxygen deficient α-quartz and amorphous silica. A first principles quantum-chemical study
G. Pacchioni and G. Ieranò 1

Problems encountered in the simulation of defects in silica and its interfaces
N. Capron, A. Lagraa, S. Carniato and G. Boureau 10

Bond length distribution analysis for native oxide structure characterization using atomic scale simulation
A. Tandia 14

Section 2. Point defects

Low temperature time resolved photoluminescence of the 3.1 and 4.2 eV emission bands in Ge-doped silica
A. Anedda, C.M. Carbonaro, R. Corpino and A. Serpi 19

Role of impurities in the 5.16 eV optical absorption band of Ge-doped silica
M. Martini, F. Meinardi, A. Paleari, L. Portinari and G. Spinolo 26

Migration of atomic hydrogen in crystalline and amorphous SiO_2: a molecular dynamics study
A. Bongiorno, L. Colombo and M.I. Trioni 30

Luminescence of SiO_2 quartz induced by swift heavy ion irradiations
J.M. Costantini, F. Brisard, G. Biotteau and L. Protin 36

In situ ellipsometry and infrared analysis of PECVD SiO_2 films deposited in an O_2/TEOS helicon reactor
C. Vallée, A. Goullet, F. Nicolazo, A. Granier and G. Turban 48

Low temperature, plasma assisted oxidation of amorphous Si
V. Girault, H. Plantier, R.A.B. Devine and F. Templier 55

Deuterium permeation through SiO_2 thin film deposited on stainless steel substrate
R. Checchetto, L.M. Gratton, A. Miotello and C. Tosello 65

Radiation enhanced transport of hydrogen in SiO_2
F. Corni, A. Monelli, G. Ottaviani, R. Tonini, G. Queirolo and L. Zanotti 71

Deposition of SiO_2 and TiO_2 thin films by plasma enhanced chemical vapor deposition for antireflection coating
C. Martinet, V. Paillard, A. Gagnaire and J. Joseph 77

Section 3. Analysis methods

Energy gap-determination of a carbon contaminated thermal silicon oxide thin film using reflection electron energy loss spectroscopy
P. Poveda and A. Glachant 83

Study of SiO_2–Si interfaces by photocurrent measurements
M.L. Polignano, G. Ferroni, A. Sabbadini, G. Valentini and G. Queirolo 88

Photoluminescence spectroscopy of direct bonded silica based wafers
A. Boukenter, Y. Ouerdane, A. Mure-Ravaud, G. Pandraud, S. Pelissier, F. Pigeon and B. Biasse . . . 95

Stationary and time dependent PL emission of v-SiO_2 in the UV range
M. Cannas, R. Boscaino, F.M. Gelardi and M. Leone 99

Low temperature photoluminescence spectroscopy relationship between 3.1 and 4.2 eV bands in vitreous silica
M. Leone, R. Boscaino, M. Cannas and F.M. Gelardi 105

Effect of fictive temperature on medium range order in v-SiO_2
C. Chemarin, B. Champagnon and G. Panczer 111

H^+ and D^+ associated charge buildup during annealing of $Si/SiO_2/Si$ structures
K. Vanheusden, W.L. Warren and R.A.B. Devine 116

Section 4. Optical fibers

Influence of the cladding thickness on the evolution of the NBOHC band in optical fibers exposed to gamma radiations
O. Deparis, D.L. Griscom, P. Mégret, M. Decréton and M. Blondel 124

Gamma and neutron radiation damage studies of optical fibres
K. Gill, R. Grabit, M. Persello, G. Stefanini and F. Vasey 129

Defects studies in silica based optical fibers by laser spectroscopy
F. Goutaland, A. Boukenter, Y. Ouerdane and G. Monnom 135

Section 5. Deposition methods and growth mechanisms

Mechanisms and kinetics of room-temperature silicon oxidation
G.F. Cerofolini and L. Meda 140

Suboxides at the Si/SiO_2 interface: a Si2p core level study with synchrotron radiation
F. Rochet, Ch. Poncey, G. Dufour, H. Roulet, C. Guillot and F. Sirotti 148

Compositional and electrical properties of $SiO_2/Si_3N_4/SiO_2$ stacked films grown onto silicon substrates and annealed in hydrogen
S. Santucci, R. Alfonsetti, A. Di Giacomo, P. Fiorani, L. Lozzi, G. Moccia, L. Ottaviano, M. Passacantando and P. Picozzi 156

Section 6. Electrical characterisation: charge injection

Hole trapping in flash EEPROM gate oxide and damages induced by gate to source erasing
P. Candelier, F. Mondon, B. Guillaumot, G. Reimbold and F. Martin 162

Generation of hot holes in MOSFET
F. Nebel, M. Jourdain, A. Meinertzhagen and P. Candelier 168

Comparison of the charges generated by Fowler–Nordheim tunneling injection in different oxides of metal–oxide–semiconductor capacitors
G. Yard, A. Meinertzhagen, C. Petit, M. Jourdain and F. Mondon 174

Section 7. Electrical characterisation: techniques

Scanning capacitance microscope, an alternative technique to the C–V measurement for the SiO_2 characterisation
F. Bordoni, L. Fasciani, R. De Tommasis, A. Di Giacomo and G. Moccia 180

The influence of quantum effects on the determination of gate oxide thickness from C–V measurements
K. Dmowski and A. Halimaoui 185

Low frequency noise characterization of 0.25 μm Si CMOS transistors
T. Boutchacha, G. Ghibaudo, G. Guégan and M. Haond 192

Section 8. Electrical characterisation: nitrided oxides

An innovative process sequence to obtain reliable nitrided active dielectrics
G. Ghidini and C. Clementi 198
Si_3N_4 thickness and its oxidation time influence on O/N/O DRAM cell performance
L. Grifoni, P. Massimi and F. Fama' 202
Silicon oxide defects in aging of MOS electronic devices
M. de la Bardonnie, A. Maouad and P. Mialhe 209
